Dear Biz Core (FSoft) Hiring Team,

I'm applying for the Senior AI Engineer role at Biz Core (FSoft). For nine years at Cubewise I built and led enterprise web platforms — most recently as Lead AI Architect & Product Owner of AVA, a production GenAI assistant launched at Amazon, AWS and ZKB. I'm based in Sydney, Australia, have unrestricted work rights in Australia, and am available immediately.

What I bring to the role

1. Governance and responsible-AI controls that pass the toughest reviews.

Everything I shipped passed governance reviews at three of the world's most demanding enterprise clients — Amazon, AWS and ZKB. Responsible-AI controls (guardrails, hallucination mitigation, PII handling) were designed into AVA from the start, and I work to threat-modelling and OWASP practices.

2. Production GenAI — taken from vision to launch at Amazon, AWS and ZKB.

At Cubewise I owned **AVA** — the enterprise GenAI assistant on the Apliqo UX platform — end to end: vision, architecture, backlog and delivery. The stack was production Python: LangGraph multi-step agent orchestration with human-in-the-loop gates, LlamaIndex RAG grounded on TM1 financial data, Vertex AI model selection, and Ragas/LangSmith evaluation pipelines. AVA launched in production in September 2025 and is deployed at Amazon, AWS and ZKB.

3. Founder-mode shipping — live AI-native products, end to end.

As a founder I've built and shipped live AI-native products end to end — **TMA (TokenizMyApp)** https://tokenizmyapp.vercel.app/, **TMA Finance** https://tokenizmyapp-finance.vercel.app/, **PRESTIX.VIP** https://prestix.vip/, **WTE — Indonesia Waste-to-Energy Copilot** https://wte-copilot-670560975972.us-central1.run.app/, **GoFetch** https://gofetchapp.vercel.app/ — all with CI/CD, Docker, feature flags and automated testing, all live today. Additional stack proof from my GitHub catalog: **Prestix app** https://prestixapp.vercel.app and **WTE — Indonesia Waste-to-Energy Copilot** https://wte-copilot-670560975972.us-central1.run.app/.

4. AI-assisted development — practitioner, not spectator.

As Lead AI Architect at Cubewise I set AI architecture and tooling standards across the engineering team, mentored 10+ developers on AI implementation patterns, and trained 30+ consultants to work with the platform. I established AI-assisted development practices — Claude, Cursor, Codex — that the whole team works to, and I practice what I preach: daily practitioner, not spectator.

5. Observability and reliability — releases that stay boring.

I built the observability stack for the Apliqo platform — Prometheus, Grafana, Sentry and Datadog, with structured logging, OpenTelemetry instrumentation and SLO-driven alerting — so releases across seven-plus white-label enterprise deployments stayed boring. Underneath it: performance engineering on TM1-scale analytics workloads, web server optimisation, and streaming via SSE/WebSockets so heavy financial dashboards stay responsive.

6. Cloud, CI/CD and platform engineering — AWS, GCP, Kubernetes.

I've built and run the full platform around the product: CI/CD with GitHub Actions and Cloud Build, Docker and Kubernetes (GKE/EKS), Terraform infrastructure as code, and GitOps with ArgoCD — delivering zero-downtime releases via feature flags, API versioning and blue-green deployments across AWS and GCP.

I'm based in Sydney, Australia — Springwood, Brisbane QLD (Hybrid) works well for me, with unrestricted work rights in Australia, and I'm available immediately. I'd welcome a conversation about how I can help Biz Core (FSoft) succeed.

Thank you for your time and consideration — I look forward to hearing from you.

Kind regards,

Ilia Shapiro
